MAGMA Expands: MAGMA Foundry Technologies Inc. Opens Branch Office in Mexico While MAGMA Engineering (Suzhou) Co. Opens New Office in Ningbo

Management:
Dr. Marc C. Schneider (CEO)
Dipl.-Ing. Mathieu Weber

Aachen, March 2025 – MAGMA has opened new offices in Mexico and Ningbo, China, to deliver enhanced service and support to customers worldwide. These new locations enable MAGMA to offer prompt, local technical assistance and advanced training programs that help customers optimize their metal casting operations.

The new office in San Pedro Garza García, close to Monterrey, Mexico, will open in the first quarter of 2025 at a prime business site. It provides direct access to expert advice, tailored software solutions, and comprehensive training through the MAGMAacademy. This initiative empowers the Mexican metal casting industry to improve production processes and boost operational efficiency.

At the same time, the new Ningbo branch in China is located in a major industrial hub for die-casting. It delivers cutting-edge simulation software and robust technical support for the regional market. The office also hosts the MAGMA Ningbo Academy, where customers benefit from in-depth courses that merge theory with practical applications. Both in-person and online options ensure that users build the skills needed for success.

"Being close to our customers around the world is essential," stated Dr. Marc Schneider, CEO of MAGMA. "Our new offices let us offer direct support and work hand in hand with clients to drive innovation and quality in their operations."

For over 35 years, MAGMA has been committed to casting excellence, leading the metal casting industry by providing technical solutions that optimize production, improve quality, and foster sustainable practices. With these strategic new offices, MAGMA reinforces its commitment to customer service and innovation, ensuring faster response times and expert guidance that drive growth and efficiency.
